

Instructions for working with a mockup

It's easy to convert a mockup into a high-quality image of your finished product.

REFORMER

Structure and principle of working with the mockup

Smart Objects are layers that contain image data from raster or vector images, such as Photoshop or Illustrator files. Smart Objects preserve an image's source content with all its original characteristics, enabling you to perform nondestructive editing to the layer.

In Photoshop CC and CS6, you can embed the contents of an image into a Photoshop document. In Photoshop CC, you can also create Linked Smart Objects whose contents are referenced from external image files. The contents of a Linked Smart Object are updated when its source image file changes.

Linked Smart Objects are distinct from duplicated instances of a Smart Object within a Photoshop document. With Linked Smart Objects, you can use a shared source file across multiple Photoshop documents which is a familiar and welcome concept for web designers.

In your document, select the Smart Object layer in the Layers panel.

Choose **Layer → Smart Objects → Edit Contents**. Or you can simply double-click the Smart Objects layer thumbnail in the Layers panel. A dialog box appears, telling you to save your changes and save the file in the same location.

Click **OK** to close the dialog box.

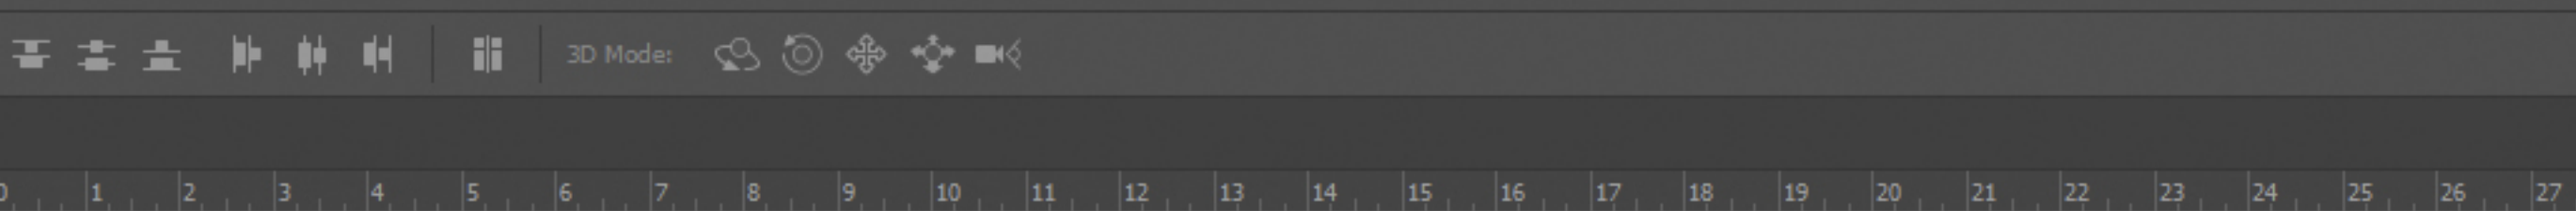

The Smart Object opens in the program in which it was created, either Illustrator or Photoshop.

Choose **File → Save** to incorporate the edits.

Close your source file.

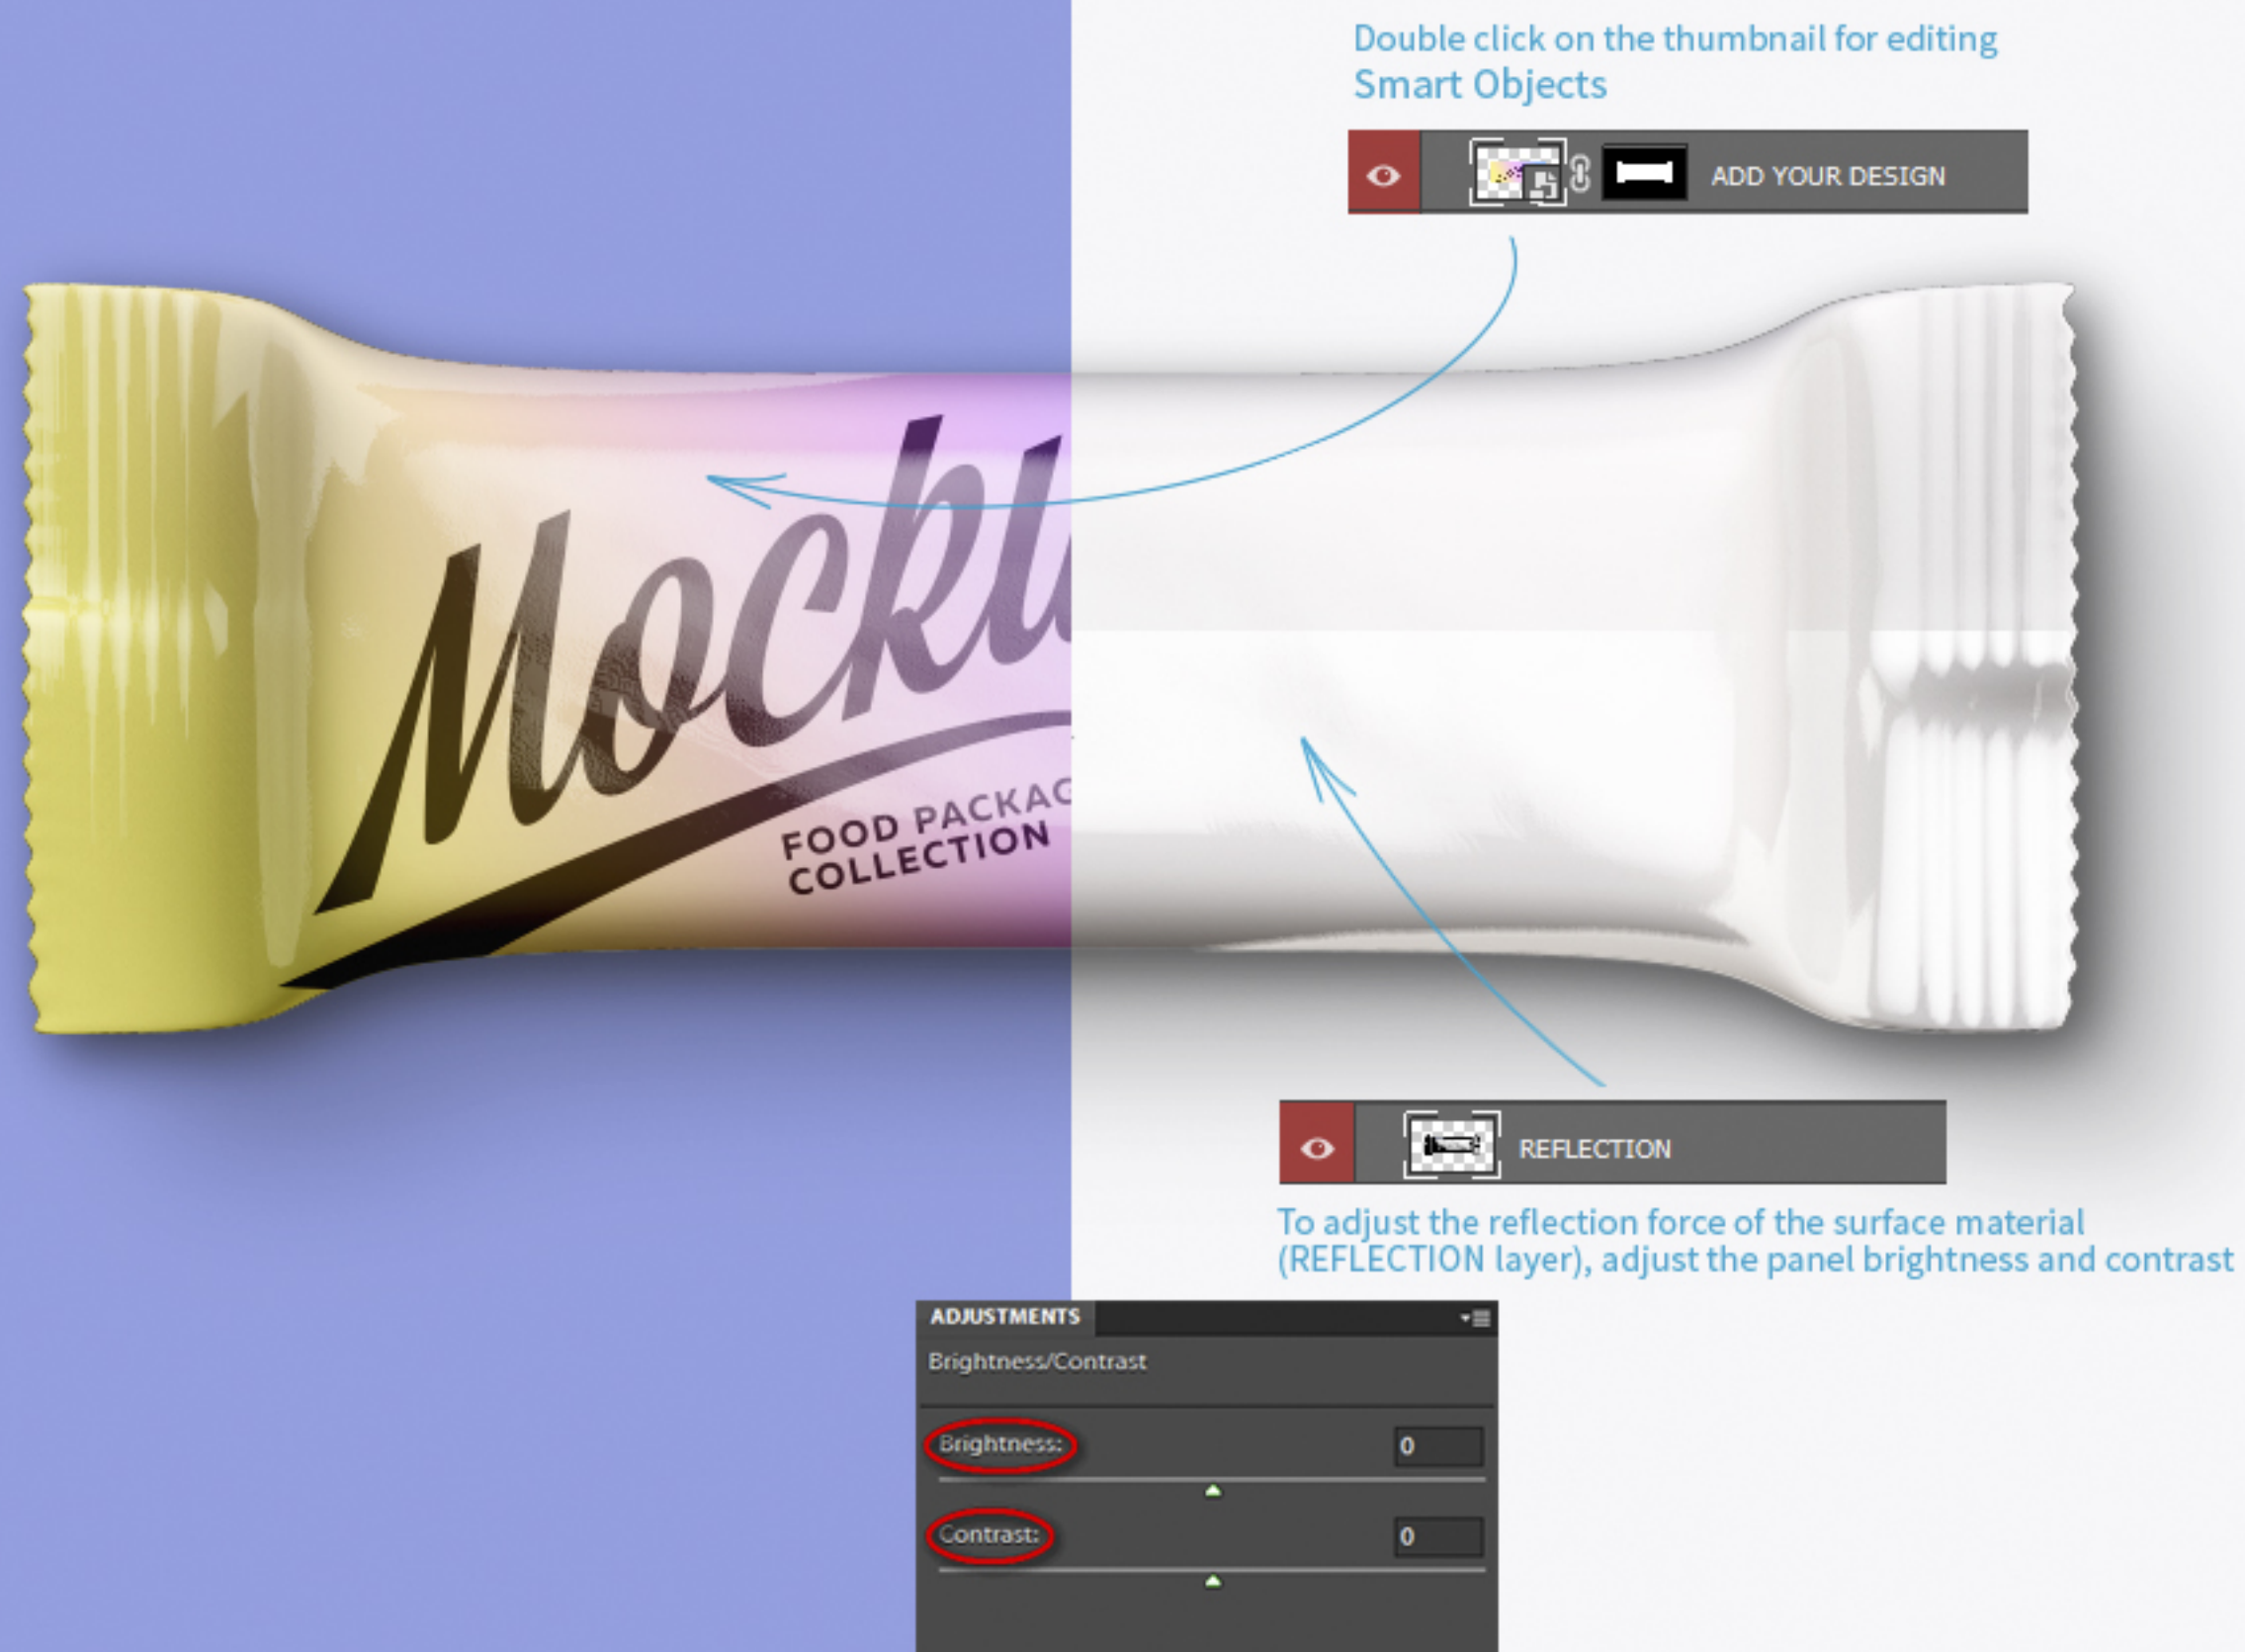

Return to your Photoshop document, which contains your Smart Object.

If all goes as expected, all instances of the Smart Object are updated

Imagine your design at the highest level

Combine the easiness of working process and an excellent result. Be professional.

License agreement

When buying in our store you are given a license to use these files for certain purposes under certain conditions. All rights remain with Reformer, and you are required to comply with the following licensing terms.

Rights

When purchasing, you have the right to use our products for any of your personal and commercial projects. You can modify resources according to your requirements and use them for free in any of your personal and commercial projects. For example, you can include this resource on a website that you will develop for the client. Reformer is not responsible for any results that may arise during the use of our products. We reserve the right to change prices and revise the policy of using resources at any time.

Prohibitions

You may not transfer, resell, lease, license, sublicense or offer a file for use by third parties. For any resellable websites or software products, you should not include our graphics resources as an additional application. This will be seen as a redistribution of our products, which is prohibited by us.

The work uses the Source Sans Pro font
